garina@abv.bg

The article offers an original perspective on the issue of the development of the Bulgarian morphological system, while containing a critical analysis as well as some complements to the theory of natural morphology and also some additions to the known theories presented in Bulgarian studies.
Keywords: half-agglutinative formant, natural morphology, tendency to reduce the average amount of grammatical information, which grammatical morphemes can carry within the preservation of the most common features of fusional type, tendency to turn to the analytical construction, agglutinative features within the fusional language system.
