

MARIA TODOROVA

**LEXICALISED GRAMMAR OF VERBAL IDIOMS IN BULGARIAN**

(Summary)

The paper describes a model for wide coverage non-contradictory morphological description of the grammatical and syntactic specifics of verbal idioms in an electronic dictionary for the purposes of natural language processing. I represent the principles of the lexicon grammars and their application in a combination of different modules – dictionaries, inflective grammars and table matrices for representation of the paradigmatic characteristics of verbal idioms in Bulgarian.
